Takashi Nishino
President
The Society of
Polymer Science,
Japan

Congratulations on the 50th anniversary of the founding of the Polymer Society of Korea. Personally, in 1995, I was invited, as a young researcher participating in the Japan–Korea Exchange Program, to the annual meeting held at Sungkyunkwan University. It was during that visit—amidst the gaenari in full bloom—that I first set foot in Korea. Since then, I have visited many times and have witnessed the great developments of polymer science and industry in Korea, and I am delighted to see your society become a world-leading academic society and a central pillar of the field.

In recent years, the world has been thrown into turmoil not only by the spread of infectious diseases, conflicts in various regions, and natural disasters, but also by environmental challenges, including the depletion of oil resources, carbon dioxide emissions, and global warming. Addressing the issues related to polymers is becoming increasingly important, and it has reached a point where no single country can solve these problems on its own. The Society of Polymer Science, Japan would like to work hand in hand with your society to strive to resolve these issues.

I wish your country's polymer science and industry, as well as the Polymer Society of Korea, continued success and growth.

다시 한번, 한국고분자학회 창립 50주년을 진심으로 축하드립니다.

Takashi Nishino
President, The Society of Polymer Science, Japan
