International Union of Pure and Applied Chemistry (IUPAC)

50th Anniversary Celebrations of Polymer Society of Korea

On behalf of the International Union of Pure and Applied Chemistry (IUPAC), it gives me great pleasure to extend warmest congratulations to the Polymer Society of Korea on the 50th anniversary of its foundation in October 1976.

The society advances academic and technological fields related to polymer chemistry, physics, biology and engineering, thereby promoting both polymer science and the polymer industry. The society has grown significantly in size and now numbers over 4,000 members.

The scientific activities of the Polymer Society of Korea have contributed to the ongoing and robust development of the Korean economy. Further, the society has nurtured distinguished scientists, educators, and leaders who have made profound contributions to the advancement of polymer sciences in the Asia-Pacific region. International collaborations also extend into the Americas and into Europe. The society supports three scientific publications including the internationally recognized Macromolecular Research.

The society has chosen to celebrate this 50-year milestone through the IUPAC-endorsed PSK50 conference to be held in Busan and which has an excellent cast of speakers with five plenary lectures and over 100 invited talks by renowned speakers worldwide. Participants from both academia and industry will greatly benefit from the insights and new perspectives in polymer science that will be presented at the meeting.

Please accept the good wishes of IUPAC for your anniversary celebration and the success of IUPAC-PSK50.

Sincerely yours,

Mary Garson

President, International Union of Pure and Applied Chemistry (IUPAC)
