Chair
Division of Polymer
Physics, American
Physical Society

On the occasion of the 50th anniversary of the Polymer Society of Korea, I extend my warmest congratulations to the Society and its members on this remarkable milestone. Over the past five decades, the Polymer Society of Korea has played a paramount role in advancing polymer science and engineering, not only within Korea but also across the global scientific community. Its sustained commitment to excellence in research, education, and collaboration has significantly contributed to the development of innovative materials and technologies that address critical challenges in energy, sustainability, and human well-being.

The organization of the IUPAC-PSK50 International Conference on Next Horizons in Polymers is a fitting tribute to this legacy. Bringing together leading scientists, engineers, and industry professionals from around the world, the conference will undoubtedly serve as a dynamic platform for sharing cutting-edge discoveries and fostering new collaborations that will shape the future of polymer science.

As we reflect on the achievements of the past 50 years, we also look ahead with great anticipation. The integration of fundamental understanding with emerging technologies will open new frontiers, from advanced functional polymers to sustainable materials systems. I am confident that the Polymer Society of Korea will continue to lead at the forefront of these advances, actively shaping the field, inspiring the next generation of scientists, and driving transformative innovations.

Once again, congratulations on this historic anniversary, and I wish the Society continued success in the years to come.

Yours sincerely,

Moon Jeong Park
Chair, Division of Polymer Physics, American Physical Society
